Charting Low Carbon, Eco-Oriented Urban Development in Shanghai

Through planning policies, research and case studies in Shanghai, this lecture aims to share about the influence of China's commitment to peak its emissions by 2030 and achieve carbon neutrality by 2060 on future urban development in Chinese cities. Experts from Shanghai Tongji University and Municipal Commission of Housing, Urban Rural Development and Management will discuss how the vision of an "ecological city" in Shanghai's 2035 Masterplan is being translated into planning strategies for urban renewal and green building and construction policies for new townships, supported by appropriate policy indicators developed through research and benchmarking with global cities to enable well-coordinated transition to meet its carbon-peaking goals.

The lecture presentations will be conducted primarily in Mandarin, with simultaneous interpretation in English.
